## Evaluation Process and Reforms

**2.5.1 Mechanism of internal/ external assessment is transparent and the grievance redressal system is time- bound and efficient**

### Response:

CBIT is affiliated to Visvesvaraya Technological University, Belagavi, Karnataka. The University regulates the guidelines for the internal and external assessment. Through induction activities and the first-year students are made aware of the evaluation process. The university permits 20% for internal marks and 80% for end-of-semester exams depending on the schemes as per the university's evaluation timetable, the internal assessment results are periodically uploaded to the university website.

### At Institution Level:

Every semester, three internal assessment tests (IAT) are given. The Academic Calendar for every semester includes information about the dates of the Internal assessment tests. One week before the Internal Assessment Test starts, the schedule for the same is made public. Even for internal assessment exams, the sitting arrangement and table markings are adhered as per main exams. Faculty members are instructed to set their own course questions, and four days before each exam, all question papers that have been properly signed by the Department head and Principal are returned the internal test coordinator for conduction of test. Parents receive progress report with the internal marks of their wards when the internal assessment test is successfully completed. Any discrepancies in the student's internal assessment test are rectified by the internal test Coordinator and Head of the department.

### Challenge Evaluation:

If the re-evaluation results are not satisfactory, a student can apply for challenge evaluation within a week after the announcement of the results. This evaluation process is carried out by an expert appointed by the University.

**CIRCULAR**

It is hereby informed to all the 5<sup>th</sup> Semester students that 2<sup>nd</sup> Internal Assessment is scheduled from *February 8<sup>th</sup>* to *February 10<sup>th</sup>* 2024. And the following guidelines to be maintained for the upcoming internals.

1. The students should have 75% of attendance compulsory.
2. The students should have cleared the fees as mentioned below.
  - CET Students should clear the complete fees of the Academic year.
  - Management Students should clear 50% of their college fees (Current Academic year).
  - SNQ students should clear the complete fees of the Academic year.

Semester: VII  
 Subject name and code: Artificial Intelligence and Machine Learning  
 Duration: 90 minutes

Section: A  
 Subject code: 18CS71  
 Max Marks: 50

*Answer the following question selecting ONE full question from each PART*

Q No		Marks	COs	Levels
<b>Part A</b>				
1	a) Define artificial intelligence? List and explain various task domains of AI	02+08	CO1	L1
	b) A water jug problem states "you are provided with two jugs, first one with 4-gallon capacity and the second one with 3-gallon capacity. Neither have any measuring markers on it." How can you get exactly 2 gallons of water into 4-gallon jug? a. Write down the production rules for the above problem. b. Write any one solution to the above problem.	10	CO2	L2
	c) Explain A* algorithm	10	CO2	L2
<b>OR</b>				
2	a) Briefly discuss AI problem characteristics.	10	CO1	L1
	b) Explain AO* algorithm.	10	CO2	L2
	c) i) Write an algorithm for Steepest-Ascent hill climbing. ii) Crypt arithmetic problem: SEND + MORE = MONEY. Initial state: No two letters have same value. Sum of digits must be shown	03 07	CO2 CO2	L2 L1
<b>Part B</b>				
3	a) Consider the following sentences i. Marcus was a man ii. Marcus was a Pompeian iii. All Pompeian were Romans iv. Caesar was a ruler v. All Romans were either loyal to Caesar or hated him. vi. Everyone is loyal to someone vii. People only try to assassinate rulers they are not loyal to. viii. Marcus tried to assassinate Caesar. a) Translate these sentences into formulas in predicate logic?	10	CO2	L1

	b) Prove was Marcus loyal to Caesar?			
	b) Illustrate in detail about forward and backward reasoning and solve the given example using forward and backward reasoning.  <b>Given facts:</b> A, B, C, E, G, H <b>Rules:</b> F&B->Z C&D->F A->D	04+06	CO2	L2
OR				
4	a) Consider the following set of well-formed formulas in predicate logic: Man(Marcus) Pompeian(Marcus) $\forall x: \text{Pompeian}(x) \rightarrow \text{Roman}(x)$ Ruler(caeser) $\forall x: \text{Roman}(x) \rightarrow [\text{loyal}(x, \text{caeser}) \vee \text{hate}(x, \text{caeser})]$ $\forall x: y \text{ loyalto}(x, y)$ $\forall x: \forall y: (\text{man}(x) \wedge \text{rular}(y) \wedge \text{Tryassissinate}(x, y)) \rightarrow \text{Loyalto}(x, y)$ Tryassissinate(Marcus, Caesar) Convert these into clause form and prove that hate("Marcus, Caesar" ) using Resolution proof	10	CO2	L1
	b) i) List the difference between Procedural and Declarative knowledge. ii) What is matching in rule based system? Briefly explain the different proposals for matching.	04+06	CO1	L2

Sub Code	18CS71	Date	02/11/2023	Date	23/10/2023

Note: i) Attach a copy of Internal Assessment Question Paper along with the scheme

ii) Question wise split up marks allotted for different steps of answers is to be mentioned properly

Q. No.	Solution	Marks allotted
	Part A	
1 a	<p>Artificial intelligence is the study of how make computers to do things which people do better at the moment. It refers to the intelligence controlled by a computer machine.</p> <p style="text-align: center;"><b>Mundane Tasks</b></p> <ul style="list-style-type: none"> <li>• Perception <ul style="list-style-type: none"> <li>- Vision</li> <li>- Speech</li> </ul> </li> <li>• Natural language <ul style="list-style-type: none"> <li>- Understanding</li> <li>- Generation</li> <li>- Translation</li> </ul> </li> <li>• Commonsense reasoning</li> <li>• Robot control</li> </ul> <p style="text-align: center;"><b>Formal Tasks</b></p> <ul style="list-style-type: none"> <li>• Games <ul style="list-style-type: none"> <li>- Chess</li> <li>- Backgammon</li> <li>- Checkers -Go</li> </ul> </li> <li>• Mathematics <ul style="list-style-type: none"> <li>- Geometry</li> <li>- Logic</li> <li>- Integral calculus</li> <li>- Proving properties of programs</li> </ul> </li> </ul> <p style="text-align: center;"><b>Expert Tasks</b></p> <ul style="list-style-type: none"> <li>• Engineering <ul style="list-style-type: none"> <li>- Design</li> <li>- Fault finding</li> <li>- Manufacturing planning</li> </ul> </li> <li>• Scientific analysis</li> <li>• Medical diagnosis</li> <li>• Financial analysis</li> </ul> <p style="text-align: center;"><i>Some of the Task Domains of Artificial Intelligence</i></p> <ul style="list-style-type: none"> <li>➤ Game Playing and theorem proving share the property that people who do them well are considered to be displaying intelligence.</li> <li>➤ Another important foray into AI is focused on Commonsense Reasoning. It includes reasoning about physical objects and their relationships to each other, as well as reasoning about actions and other consequences.</li> <li>➤ To investigate this sort of reasoning No well Shaw and Simon built the General Problem Solver (GPS) which they applied to several common sense tasks as well as the problem of performing symbolic manipulations of logical expressions. But no attempt was made to create a program with a large amount of knowledge about a particular problem domain. Only quite simple tasks were selected.</li> </ul>	<p>02</p> <p>02</p> <p>03</p> <p>03</p>

Procedural Knowledge	Declarative Knowledge
Knowledge about "how to do something". For e.g: (i) To determine Peter or Robert is older, first find their age. (ii) Procedure to harvest a crop	Knowledge about "that something is true or false". For e.g: (i) Peter is older than Robert. (ii) Knowledge of the month when a crop should be harvested
In procedural representation they say how they will be examined.	In declarative, they does not say how they will be examined.
Focuses on tasks that must be performed to reach a particular objective or goal.	Refers to representation of objects and events.
High efficiency	Higher level of abstraction
Low in modifiability	Good modifiability and good readability
Followed in C++ and cobol	Followed by sql

**Matching:** matching between the current state and the precondition of the rule.

**a) Indexing**

One way to select applicable rules is to do a simple search through all the rules, comparing each one's preconditions to the current state and extracting all the ones that match. But there are two problems.

- In order to solve problem, it will be necessary to use a large number of rules. Scanning through all of them at every step of the search would be hopelessly inefficient.
- It is not always immediately obvious whether a rule's preconditions are satisfied by a particular state.

**b) Matching with variables**

The problem of selecting applicable rules is made more difficult when preconditions are not stated as exact descriptions of particular situations but rather describe properties.

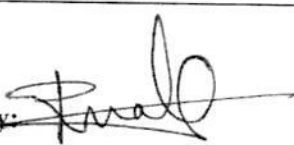

**c) Complex and Approximate matching**

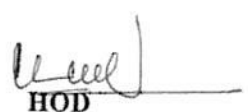

A more complex matching process is required when the preconditions of a rule specify required properties that are not stated explicitly in the description of the current state.

**d) Conflict resolution**

- **Preferences based on rules**
  - Specificity of the rules
  - Physical order of the rules
- **Preferences based on objects**
  - Importance of objects
  - Position of objects
- **Preferences based on states**
  - One way of selecting among them is to fire all of them temporarily and to examine the results of each.
